

PLAY LIVES ON!
www.polfisan.com.tr

Polfisan®

" We don't stop playing because we grow old.
We grow old because we stop playing."

George Bernard Shaw

Who we are?

As the Polfisan family, which began its journey as a modest workshop in 1997, we have become one of the leading companies in the industry after 29 years.

We are dreamers.

We dream, design those dreams, and bring them to life, sharing in the dreams of thousands of children every day. We put ourselves in the place of children. We observe them, envision their dreams, and join them in their games. We work carefully and delicately to turn their dreams into reality.

We take our work seriously.

As a company whose products are used by children, we are aware that our work is not child's play. We prioritize safety above all else. We assume that every child is our own and keep safety as our top priority.

We consider honesty and a strong work ethic as non-negotiables.

We value our colleagues, our community, our customers, and our suppliers, building relationships based on these values. We do not mislead people or make promises we cannot keep. We produce our products with quality, ensure timely shipments, and do our work correctly. We reject selfishness and greed.

We know our customers are our greatest asset.

We believe that sales are not the end but the beginning. We shape all our services based on establishing long-term relationships. We stand behind the products we sell, providing post-sale support without any hesitation. We consider reliability as our principle.

We are renewing and revitalizing ourselves.

We are a fast and young team that is not afraid of continuous innovation. We do not tire from running or give up on keeping up with the world. We create added value and build brand value.

We are aware of our social responsibilities.

We support all efforts that contribute to social development. We stand by education and sports. We are behind the youth. We are in the hearts of children.

The Vital Role of Playgrounds in Child Development

In the past, children played the five stones game on sidewalks to develop hand-eye coordination, set up a field with four stones to run after a ball, and lost themselves in the geometric universe they created with a single stone on the pavements.

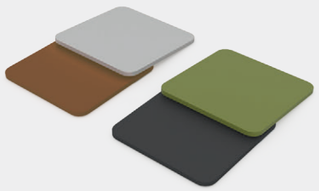
Times have changed, and technology has advanced. Urban populations have increased. While all these changes had both positive and negative effects, the conditions of adult life changed, and so did the ways children play. With the rising population, the streets, avenues, and sidewalks that were once part of children's play areas became exclusive to pedestrians and vehicles. Technological advancements brought forth children who retreat into comfort zones, playing games on computers and tablets instead of running outside and releasing their energy into nature. The variety of games played in the streets have already become relics of the past.

For a child, being outdoors is the only way to explore the world that surrounds them.

In today's world, where the culture of street games has been replaced by technological play, playgrounds have gained tremendous importance. Playgrounds have become the safest places for children to freely experience their motor skills. In outdoor playgrounds, children will invent new games while playing and will continue to explore the world confidently and in their own ways.

MATERIALS USED IN OUR PRODUCTION

We believe that every detail matters in production. Therefore, we use high-quality materials and components in our manufacturing process, all of which have the necessary certifications and approvals. As a result, we achieve final products that are not only aesthetic and functional but also durable, long-lasting, and compliant with standards.

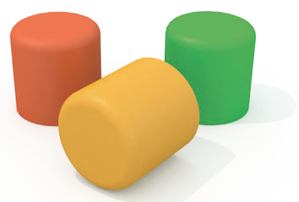


METAL

Metal materials are cleaned of grease and dirt through a sandblasting process for surface preparation after production. Following this, they undergo a fully automated electrostatic powder coating process. This ensures surfaces that are resistant to corrosion caused by outdoor weather conditions.

POLYETHYLENE

The original polyethylene raw material used in rotational production is specifically designed with density and properties suitable for outdoor park equipment, ensuring high durability. Its resilience is further enhanced with additional materials that provide protection against seasonal changes and sunlight exposure.



HPL

HPL, produced by pressing kraft papers under high pressure, is a decorative and elegant industrial product highly resistant to atmospheric conditions. It is extremely useful for outdoor and humid environments and is featured in our high-design-power products.

HDPE

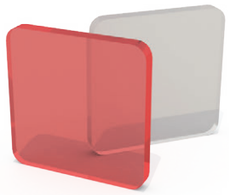
HDPE, made from high-density polyethylene, is a material resistant to atmospheric conditions, freezing, UV exposure, and moisture, offering high durability. It is used in areas where users make direct contact and where strength is required in our products.

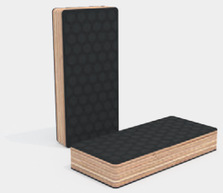
DIGITAL PRINTED POLYCARBONATE

UV digital printed polycarbonate panels, prepared uniquely for the theme of different concepts, are used in designs. These digitally printed panels reflect design uniqueness and creativity in playgrounds while providing a spacious and transparent interior.

TRANSPARENT POLYCARBONATE

Transparent polycarbonate material, available in colored and colorless solid flat sheets, enhances the amount of light inside towers in playgrounds. It acts as a windbreaker in tall tower structures, ensuring user safety. It is UV-resistant, with light transmission comparable to glass, and is highly resistant to heat and impact.



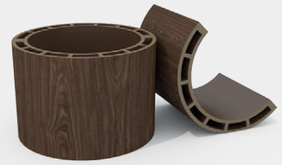


PLYWOOD

Plywood, known for its anti-slip surface and high impact resistance, is used as flooring material for compact products.

COMPOSITE

This coating product, obtained through the extrusion method, contains a specific ratio of wood powder, plastic derivatives, and binding materials. It combines the natural appearance of wood with the durability and low maintenance requirements of polyethylene.



PLASTISOL

Plastisol, used as the outer coating of platforms in playgrounds, provides excellent impact absorption, significantly reducing the risk of injuries from minor or severe falls. Its porous structure prevents water retention and enhances material durability.

ROPE

Polypropylene braided ropes, with diameters of 16 mm and 18 mm, are reinforced with steel wires inside. The steel wires and the outer surface of the ropes are covered with UV-resistant polyamide.

PROPYLENE ROPE

Propylene rope, commonly used in multi-user and swinging products in our playgrounds, is made from propylene material and reinforced with a steel rope core, making it highly resistant to pressure and tension.

CHAIN

Chains, generally used in movable products, are galvanized to provide resistance to air and humidity conditions and to protect against corrosion. They are manufactured smooth and burr-free.

PLASTIC CONNECTION EQUIPMENTS

Plastic connection equipment is designed to meet product-specific needs. Components such as clamps, which are used to assemble products in their disassembled state, are manufactured from polyamide material for break resistance. Elements like plugs and caps are used to protect product parts from water and deformation.

METAL FASTENERS

Our playground equipment is assembled using bolts, nuts, and other materials in appropriate sizes and dimensions for the product. Exposed bolt ends that may come into contact with users are covered with nut caps.

PRODUCTION PROCESSES

We are aware that, in addition to the quality of the components and raw materials used in products, proper processing of these materials with the right machinery and craftsmanship is equally important for achieving the final quality. At every stage of the production process, which begins with design, our priority is to process high-quality materials in-house to deliver premium final products to end-users.

CNC FIBER LASER CUTTING MACHINE

Our product's pipe, profile, sheet, and stainless steel sheet components are precisely and systematically manufactured by cutting them according to specified designs and measurements.

PIPE BENDING MACHINE

This machine performs cold bending of steel pipes and profiles in our products using hydraulic force.

ELECTROSTATIC PAINTING FACILITY

The surfaces of metal products are painted with electrostatic powder coating in a fully automated paint line. This process not only provides the desired appearance according to the design but also ensures long-lasting protection of metal surfaces against weather conditions.

ROTATION MACHINE

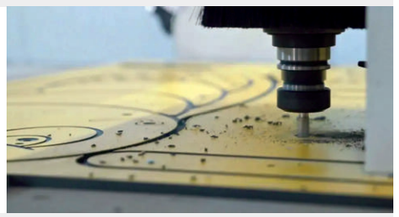
It ensures the production of plastic components for playground equipment using polyethylene material. In our rotational manufacturing, original polyethylene raw material and UV-stabilized powder paint pigments are used, along with additives that prevent static electricity and enhance durability.

CNC MILLING LATHE

CNC machines process steel rods and tubes into shafts and hub components for movable parts of our products using diamond cutting tools.

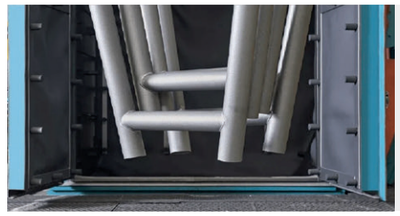
CNC ROUTER

CNC routers perform engraving, shaping, relief, and text carving operations on materials like HPL, HDPE, and plywood, as well as many other types of sheet materials.



DIGITAL PRINTING MACHINE

The digital printing machine prints colorful digital designs on materials using ultraviolet light. After the ink is applied to the material, it is cured quickly under UV light, ensuring the durability and quality of the digital design.



SANDBLASTING MACHINE

Sandblasting removes unwanted surface defects such as rust, grease, and weld slag from metal components by propelling steel particles onto the surface. It ensures optimal paint adhesion by thoroughly cleaning metal surfaces before painting.

PLASTISOL COATING MACHINE

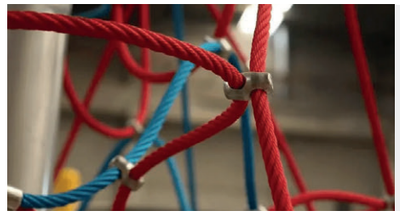
This machine coats metal surfaces with plastisol to enhance resistance to wear and corrosion, reduce vibration, eliminate sharp and slippery surfaces, and give a decorative appearance.

CNC PLASMA CUTTING MACHINE

It ensures the shaping of thick steel sheet materials used in the metal components of our products according to specified designs and measurements.

PRESS BRAKE MACHINE

Press brake machines are used to shape and bend metal sheets at specific angles. They apply tons of pressure to shape steel sheets used in our products.



ROPE PROCESSING FACILITY

Steel-cored polypropylene ropes are cut to the specified lengths on cutting lines. With the help of hydraulic presses applying 150 tons of pressure, the ropes are securely bound using aluminum or plastic-based connectors to create product components.

WELDING MACHINE

Our skilled welders use welding machines to join multiple metal parts with gas-shielded welding techniques.

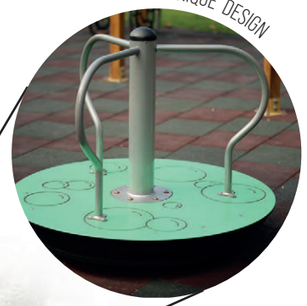
CRAFTMANSHIP

At the heart of our production lies human labor. While high-tech machinery and quality materials form the foundation of our work, the true element that brings these components together is expert craftsmanship and mastery. Our experienced and skilled artisans meticulously and carefully combine each piece to perfection.

PROJECT AND IMPLEMENTATION

There are many variables that are important in project work. These variables are taken into account during design and consist of certain stages

DEVELOPMENT OF MOTOR SKILLS



UNIQUE DESIGN

The better this combination between space and product, the more fun it provides in playing, physical activity and learning. They adopt this situation even more by experiencing nature, especially with designs inspired by nature.

PHYSICAL ACTIVITY

EASE OF ACCESS

In the first stage, it is planned to design sustainable areas compatible with user needs, space and concept, while on the other hand, functional areas that contain elements that support both mental and physical development are planned. The designed park area should also be properly integrated with its location.

UNITY AND SHARING

EMOTIONAL BOND IN PARENT-CHILD RELATIONSHIPS

After all the site analysis, product selection and space design stages, the products deemed suitable are installed on the site. During the application phases, the products produced are assembled on site, regardless of the color, texture and size of the product seen in the project.

“Play gives children a chance to practice what they are learning.”

Fred Rogers

Children must apply what they know to achieve better results. The gains from each game will provide them with new benefits in new forms of play.

SAFARI ISLAND

The Safari Island series is a fun play world that brings little explorers together with the animals living deep in the forest.Decorated with a variety of animal figures, this series aims to nurture children's love for animals while sparking their curiosity about nature.

The courage of the lion, the strength of the elephant, the joy of the monkey, and many more wild friends are waiting for children in this series.

DINO PARK

The Dino Park series is adorned with images that will take little users to the era when dinosaurs ruled the earth, featuring a colossal ancient world filled with dinosaurs we've always known but never seen.
With Dino Park bringing the past to the present, the goal is to welcome the little explorers to a world full of new discoveries and excitement.

SCIENCE FEST

The Science Fest series is a fun world of science and technology designed for curious minds to explore. It showcases various scientific figures, images, and topics, supporting children's learning while having fun.
The aim is to provide an ideal play area that reinforces the exploration passion of little scientists.

LOST TREASURE

An exciting playground series that invites little adventurers into the depths of the sea, filled with shipwrecks, lost cities, and hidden treasures. The goal is to strengthen the desire to explore through the imagination of little explorers as they approach the adventure filled with the mysteries of the underwater world with every step.
Those who dive deepest will find the lost treasure!

“ Play is the first art of humanity.”

Jean Paul Sartre

Play is the only way for a child to learn. Through play, stimuli from the immediate environment accelerate children’s physical and mental development, triggering their imagination. It enables them to generate solutions to problems, discover new things, and develop their reasoning skills. It shapes children to become well-equipped adults.

KOALA

The Koala series, which invites users on a unique journey through nature, is a play concept that brings children into the vibrant world of wildlife. Featuring a variety of climbing elements, Koala supports children's physical development, while activity panels are prominently included to encourage their sense of exploration. Harmoniously blending the green and brown tones of nature, the Koala series is designed with details that strengthen the bond between play and the natural world.

TREE HOUSE

In the Tree House, resembling a giant tree ball dominated by natural colors, having a vertical structure, a number of playgroups with high towers and extending up to the sky. It is achieved that the children in a house from a magnificent tree can play.
Different models were provided with the help of different transition elements and bridges, different end goals were created by positioning slide at different heights.

“ Playing is the childrens way to discover the world in which they live.”

Maxim Gorki

The world is a vast mystery waiting to be discovered. Children begin this journey of discovery through play, and this play continues throughout their lives.

FORTRESS TOWER

Fortress Tower series , aims to provide safe and playable games for different age groups with slides of different heights and access contrasts.

The series has a vertical and hexagonal tower structure.

ATLANTIS

In the Atlantis series, in which the underwater image of a submerged civilization is depicted, the user will have to meet mysterious sea creatures while trying to reach the slides, the most mysterious treasures of the lost city.

The Atlantis series has a hexagonal tower structure and is lots of fun.

AMAZON

In the Amazon series, in which the pouring rain turns into lush forests, the color theme that overlaps with nature is depicted in the hexagonal tower system.

The playful monkeys may steal his hat if the wearer is not careful while walking among the toucans and parrots.

“ Children need the freedom and time to play. Play is not a luxury. Play is a necessity. ”

Diane Ackerman

Play is freedom and liberty. The feeling of wanting to play is a primary need that must be fulfilled for a child.

EAGLE'S NEST

It is a high tower game series that offers the user a wide playing field and a feeling of freedom during the game thanks to the transparent general design that consists of a square pulley system.

In the Eagle's Nest series, with a vertical tower structure soaring into the sky like eagles, was visualized by targeting the integrity of the design rather than the detailed design.

**“Seriousness excludes play.
Play, however, encompasses seriousness.”**

Johan Huizinga

Play is fun. It rebels against the boredom brought by routine and daily life. However, whether it belongs to children or adults, every game can only be played with complete seriousness.

SQUIRREL HOUSE

It's a game series in which little squirrels hide in huge trees in the forest. By using wood and green tones, children are given the feeling of playing in natural colors.

The Squirrel House series is positioned so that children can easily reach them and it has a horizontal tower structure with activity boards that teach in a fun way.

GHOST TOWN

It's a game series that deals with details like funny ghosts, collapsed walls, and cracked roofs in an abandoned city.

In the Ghost Town series, where themed designs are scattered in different locations, a sense of curiosity is achieved in children's minds to be piqued and a part of that story as it plays out in the story.

VILLAGE

It is a series of games inspired by the storehouses in our villages. We want to build a bridge between the past and the present by bringing these houses to today's children. Traditional agricultural products and textures of wooden houses are mixed into the design of the series.

In the Village series, which consists of one or more houses, the passages between the houses are provided by bridges.

PLAYHOUSE

Playhouse is a series of playground that allows young users to move freely inside and outside the playhouse and engage in various games.
Users can either participate in the interactive games included in the design or create their own games and interact with other users. Open windows and doors encourage users to interact with the outside world and motivate them to play classic street games like hide and seek.

“Play is a serious matter.”

Johan Huizinga

Children get to know themselves while playing, learn how to communicate with others, and engage in physical and emotional interactions with them. They lay the foundation for the behavioral patterns they will carry throughout their lives.

PLAY PANELS

Play panels are educational and instructive game boards designed to help children develop and enhance their general motor skills, such as perception and movement, cognitive development, emotional growth, and language skills. These panels offer engaging and stimulating activities tailored to these objectives.

They strengthen children's perception of colors and shapes, encourage them to experiment, and foster their creativity. They trigger a desire to collaborate with other children and bring their imaginations to life across different dimensions.
All these elements comprehensively stimulate children's early **intellectual development**. The ability of activity play panels to teach while entertaining increases children's enthusiasm and motivation for learning.

HP101 · 3 IN A RAW
The player who lines up three balls of the same color in a row wins the game.

HP106 · MATCH COLORS
The player who arranges the colors correctly on the board made of three separate colored balls wins the game.

HP102 · FOOTPRINT
Aims to match animals with their footprints.

HP107 · COLORS
Aims to associate basic colors with images of fruits and vegetables.

“You can get to know a person better in one hour of play than in a year of dialogue.”

Plato

Play is the arena where, regardless of whether one is a child or an adult, an individual’s responses to external influences in the real world -responses they wish to express but feel restrained in doing so-can remain free.

STONE AGE

Stone Age series is an original design with horizontal construction, where we use images of stone age and its projections in children, visualizing these images in a way that allows children to approach them with sympathy. Single floor stone house blocks that can be combined with the help of various bridges are supported with various elements for easy access of children.

MAGIC HOUSE

Magic House series is an original vertical design that we developed to deconstruct the standard and scary Magic House concept that is in the perception of children and reconstruct it with the Magic Game House concept. In the design, which has soft and relaxing color tones, the images of fear in the minds of the children are stretched as mocking and it is aimed to include the children almost in the fairy tale with the help of their imagination.

BALL FREESTANDING

“ In every real man a child is hidden that wants to play.”

Friedrich Nietzsche

Children engage in play willingly and with their whole being. Through play, they discover themselves and reach their true selves. The biggest difference between adults and children is their age.

NATURE

Nature Series

The Nature series is designed with wooden composite materials used in the main components, such as the tower columns, while the remaining components feature colors and themes inspired by nature. In addition to the ladders used in standard play structures, various access elements have been created to enhance accessibility.
The aim is to extend composite playgroups by adding independent composite products, transforming them into a comprehensive set.

What is Wooden Composite?

Wooden composite is the general term for products made using a specific ratio of wood powder and polyethylene material through the extrusion method. It is eco-friendly, as it is recyclable and maintains the natural appearance of wood while possessing the durability of polyethylene.
This material is highly resistant to weather conditions, rain, humidity, and sunlight. It requires less maintenance than wood and has a longer lifespan. Unlike wood, it does not require varnish or regular protective coatings. Wooden composite is produced using wood shavings, not cut trees, making it an environmentally conscious choice.

“Play is the highest expression of human development in childhood for it alone is the free expression of what is in a child’s soul.”

Freidrich Fröbel

Play is the most important tool for shaping both mental and physical development.

KINETICS

Slides, merry-go-rounds, jumping, climbing, bridge crossings, balance walks... These have always been the favorites in playgrounds. Instead of viewing these play elements as activities to start and finish, we have reimagined them as an endless journey.

It's a journey of play that begins but never truly ends, one that creates goals and allows for new goals to emerge. A never-ending adventure. Additionally, it is a unique series that enables users to engage all their motor skills with accessible elements and a fundamental structure.

With the Kinetics series, play becomes more active, more educational, and more fun.

**"A FINITE GAME IS PLAYED TO WIN,
AN INFINITE GAME IS PLAYED
TO KEEP PLAYING."**

Alda van EYCK

“Play is our brain’s favorite way of learning.”

Diane Ackerman

Children apply the practices of situations they observe in different areas during play and reinforce what they have learned. Play provides children with the opportunity and time to learn.

“Play is the work of child.”

Maria Montessori

The play area is the workspace where a child can work freely. Mud and dust are the work clothes of the child engaged in their activity. The dirtier they are, the better they are doing their job.

“ A child loves play, not because it’s easy, but because it’s hard.”

Benjamin Spock

Effort and perseverance are essential for success in play, just as in everything else. Each game that encourages maximum effort will yield positive results not only for children but for society as a whole.

“ Play is the source of everything good. ”

Freidrich Fröbel

Everything begins with play. Play is not the result; rather, it is a good starting point.

ACCESSIBLE

Safety and accessibility in playgrounds are of even greater importance for children with disabilities. For this reason, playgrounds designed for children with disabilities must be tailored to their needs. At the same time, these playgrounds should ensure that children with disabilities are not isolated from other children, but rather included and socially engaged with them.

All of this is made possible by our Accessible Playgrounds. Thanks to ramps, children with disabilities can easily access towers with wheelchairs and participate in various activities. They can swing on swings, enjoy seesaws, and engage in all these activities with the special designs we have developed for them.

By overcoming the challenges they face, children with disabilities can share the same social environment and joyful experiences with their peers.

IN THE SAME WORLD OF DREAMS,IN THE SAME PLAYGROUNDS.

“The creation of something new
is not accomplished by the
intellect but by the play instinct.”

Carl Jung

Play creates a temporary and limited perfection within the chaos of the world;
it establishes order. In fact, play is the very essence of order.

“ In every real man a child is hidden that wants to play.”

Friedrich Nietzsche

Children engage in play willingly and with their whole being. Through play, they discover themselves and reach their true selves. The biggest difference between adults and children is their age.

DOG AGILITY

The Dog Agility Course is designed to meet the training and play needs of our beloved dogs. The course provides them with the opportunity to acquire new skills, fulfill their play instincts, and burn off excess energy in a safe environment, which reduces their aggressiveness. It fosters socialization with dogs and strengthens the bond between them and us. The outdoor dog training equipment is designed to cater to dogs of all sizes. It can be used either individually or as part of the full course.

DD101 · RAMP
Our friend runs up the ramp from one end to the highest point, and completes the ramp training by running down without stopping.

DD102 · SEESAW
When our friend begins to walk on the seesaw, it complete the task when the other side of the seesaw touches the ground.

DD103 · TUNNEL
The goal is for our friend to follow their owner's instructions while passing through the tunnel without making eye contact with their owner.

DD104 · SLALOM
Our friend completes the slalom training by quickly entering from one side of the first pole and exiting from the other side of the last pole.

DD105 · JUMPING PLATFORMS
Our friend jumps from platform to platform, trying to maintain balance on each one, with varying heights.

PRODUCT CODE	PRODUCT NAME	AGES	CAPACITY	FALL HEIGHT	MAXIMUM HEIGHT	SEATING AREA	SAFETY AREA
DD101	RAMP	***	1	125 cm	125 cm	75 x 450 cm	275 x 650 cm

DD105	JUMPING PLATFORMS	***	1	40 cm	40 cm	70 x 310 cm	270 x 510 cm

DD106 · BALANCE WALK
Our friend begins by running up the ramp, carefully walking in the middle, and completes the balance walk when they descend from the other side.

DD107 · HOOP JUMP
Our friend must jump through the hoop without touching it.

DD108 · PLATFORM
Our friend jumps onto the platform and follows their owner's direction to change position within the limited space.

DD109 · HIGH PLATFORM
The High Platform, added next to the regular platform, helps develop our friend's directional training as well as their jumping ability.

DD110 · JUMP BARS
Once our friend reaches a certain speed, they complete the training by jumping over bars of varying heights.

FITNESS

The importance of sports in today's world, where rapid urbanization is taking place, inactivity is increasing, and the quality of nutrition is neglected, cannot be denied. When the realities of fast living, too much work, and too little time come together, a significant obstacle arises for individuals. Time for sports and physical activity is often not created. Outdoor sports parks allow users to engage in sports during their free time. The user determines their entry time, exit time, and the duration of the exercise. Therefore, users can create a sports plan according to their personal schedule and apply it easily.

During exercise, the correct use of sports equipment is as important as the proper use of breathing. It is certain that breathing outdoors is more beneficial for the body than indoors. In outdoor sports parks, sports can be done simultaneously with sports partners of all ages.

SENIOR FITNESS

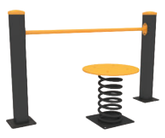
The greatest threat to active aging is inactivity. When combined with aging, inactivity leads to a reduction in mobility, balance loss, osteoporosis, and the early onset of brain, heart, and various muscle diseases in elderly individuals. In addition to physical aging, mental aging accelerates due to the stagnation in older age.

The only thing that can transform aging into active aging is exercise for elderly individuals. Regular exercise stimulates the individual both physically and mentally. It enhances the elderly individual's ability to balance, increases flexibility, and strengthens muscles. It prevents osteoporosis, shortness of breath, and forgetfulness. It reduces feelings of anxiety and depression. It improves sleep and overall quality of life.

Senior Fitness Equipments are designed to meet the needs of elderly individuals based on their age and mobility abilities.

SS201 · SNAKE PATH
Designed to increase shoulder and elbow joint mobility and to provide flexibility in the legs and knees for elderly users. This product features a panel, a path on the panel, and a movable handle along the path. The idea is to achieve physical mobility by moving the handle along the path.

SS202 · MEMORY PANEL
This product aims to enhance the memory of elderly users by having them match different patterns on the board, thus supporting the development of their memory and preventing mental sluggishness.



SS203 · HIP SPRING
This product consists of a seat for the elderly user and a metal bar. The user attempts to maintain balance using their body weight. It is the safest way to improve body control and balance, engaging arm and waist muscles along with balance sensitivity.

SS204 · SHOULDER WHEEL
This product allows the elderly user to rotate the wheel from right to left or left to right with the help of a handle. It is designed to accommodate usage in opposite directions and with adjustable settings.

SS205 · HAND ROLL
The product allows the elderly user to hold the movable hand grips and rotate the wheels, thus working on wrist, arm, elbow, and shoulder joints and muscles. The user can rotate both right and left wheels simultaneously in parallel or opposite directions.

SS206 · FINGER STAIRS
This product, consisting of a vertical beam with sequential slots where fingers are placed, is designed to develop finger and hand skills for elderly users. It improves hand-eye coordination and also provides functionality for the elbows and shoulders.

SS207 · STEP AND CALF
Made of two different angled steps, this product is designed to enhance leg mobility and work on joints. It is suitable for two separate users to use simultaneously.

SS208 · SNAKE BAR
Made of a metal bar in a zigzag shape and a surrounding movable handle, this product aims to improve hand-eye coordination while placing load on the waist and legs.

SS209 · SHOULDER ARCHES RIGHT
This product consists of a sloping metal bar and a surrounding movable handle. The user's goal is to develop hand-arm coordination with this product.

SS210 · BALANCE BAR
Designed to enhance hand-arm coordination for elderly users, this product includes a circle surrounding a horizontal metal bar, which should be moved along the bar with minimal contact.

SS211 · SHOULDER ARCHES
Composed of four horizontal metal bars, each with a movable handle, this product is designed for elderly users to develop shoulder and arm muscles with curved movements and to open the chest. The product is adjustable in height and can be used at various angles.

SS212 · WRIST WORKOUT
This product consists of two vertical metal bars and surrounding handles. The goal is for the user to move the handles vertically up and down, promoting wrist flexibility and mobility.

SS213 · TWIST
This product consists of a circle on which the elderly user steps and a metal bar in front. The user is encouraged to gently twist their waist using light movements.

SS214 · BALANCE
Designed for elderly users, this balance walking product aims to enhance balance and stability functions.

WHERE DREAMS BEGAN

Once upon a time, dreams began in the streets.
Children skipped ropes, built castles from stones, and climbed trees to touch the sky.
Paper boats sailed in puddles, and small streets turned into the stage for grand stories.

Neighbors knocked on doors for a cup of sugar, and tea was always shared.
Fairy tales warmed winter nights, while stars silently watched over the games.

Life revolved around sharing and discovering.
Today, our children's dreams take shape in different play spaces.

Playgrounds have become new fairy tale worlds, where imagination takes flight and laughter echoes.

WE TOUCHED THE DREAMS OF OUR CHILDREN.
WE BUILT WORLDS WHERE PLAY AND DREAMS COME ALIVE FOR THEM.
AND WE WILL CONTINUE TO DO SO.
